

RMFA–JIWA™

Meaning-Centric AI Recovery Governance Framework

Official Research Whitepaper v1.0

Author: Rohaini Hamat

Year: 2026

Framework Status: Experimental Research Architecture

Abstract

RMFA–JIWA™ is a multidisciplinary governance and recovery intelligence framework designed to model human instability, relapse behavior, emotional residue accumulation, and meaning-centered recovery pathways using artificial intelligence.

Introduction

The framework proposes a governance-centered AI architecture integrating behavioral modeling, governance intelligence, computational psychology, and recovery stabilization mechanisms to improve relapse prediction and human-centered intervention systems.

Core Components

1. **RMFA Layer** — Residual Meaning Fragmentation Analysis
2. **JIWA Layer** — Governance Intelligence Modeling
3. **IHSI Layer** — Integrated Human Stability Index
4. **Tensor Layer** — Relational interaction modeling
5. **Recovery Layer** — Recovery intelligence and stabilization

Research Domains

- Artificial Intelligence Governance
- Computational Psychology
- Addiction Recovery Intelligence
- Human Stability Modeling
- Behavioral Intelligence Systems

RMFA Concept

RMFA models emotional residue accumulation caused by unresolved trauma, identity fragmentation, behavioral instability, and existential degradation. The framework assumes relapse risk increases when accumulated residue exceeds governance stabilization capacity.

JIWA Governance Intelligence

The JIWA layer functions as a governance intelligence engine capable of modeling human governance coherence, adaptive stabilization, and meaning-centered recovery pathways.

Integrated Human Stability Index (IHSI)

The IHSI is a multidimensional stability scoring mechanism integrating emotional, cognitive, social, recovery, and meaning-based stability indicators.

Implementation Roadmap

Phase 1 — Conceptual Foundation

Phase 2 — Experimental Prototype

Phase 3 — Validation & Benchmarking

Phase 4 — Research Expansion

Phase 5 — Commercialization & Patent Route

Ethical Notice

RMFA–JIWA™ is an experimental research framework and is not intended to replace clinical diagnosis, psychiatric treatment, or licensed medical intervention.

Intellectual Property Ownership

All conceptual architectures, governance models, tensor formulations, RMFA structures, JIWA governance intelligence systems, and associated recovery intelligence mechanisms remain the intellectual property of the original creator.

Defensive Publication Strategy

- GitHub Private Repository
- Timestamp Evidence
- PDF Export & Archival
- OSF / Zenodo Publication
- arXiv Preprint Release

Conclusion

RMFA–JIWA™ introduces a new direction for governance-aware AI systems by integrating meaning-centered intelligence, recovery governance, human stability modeling, and behavioral reasoning into a unified research architecture.

Experimental Status Classification

Module	Status
RMFA Theory	Conceptual
IHSI Scoring	Prototype
Relapse Prediction Engine	Experimental
Governance Tensor Modeling	Research Stage
Clinical Validation	Pending
